
Sediment trap observations from the Gulf of St. Lawrence and the continental margin of eastern Canada

Nancy Romero Ibarra, Norman Silverberg, S. Roy & C. Lovejoy

Sediment trap samples have provided the first direct observations of the sinking particles that account for the export of material out of the photic zone in the Gulf of St. Lawrence, as well as their relationship to variations in the trophic regime. Particles were collected at several sites over 24-h periods using 0.03
